

30mm Linear Linkless Magazine

Meggitt Defense Systems' 30 years of experience in developing next-generation ammunition handling systems for future combat platforms has resulted in several breakthroughs, including the modular, lightweight 90-round Linear Linkless Magazine.

This is a Linkless 30mm magazine and transfer system for application in future weapon systems that incorporate a Mk 44 weapon. Developed in an accelerated design-to-prototype program, it is designed to provide ammunition storage, in a given space, with increased capacity and decreased weight, when compared to a similar sized linked storage and feed design.

This magazine design offers the very high reliability of Linear Linkless Ammunition Handling, which has been demonstrated for many years in our 30mm Apache and Blackhawk Systems and in our 25mm AC-130U Spectre Gunship systems.

The 90 round magazine pictured here became the test demonstrator that finalized a decision to utilize 30mm Linkless Ammunition Handling in the Future Combat Systems (FCS) Infantry Combat Vehicle (ICV) and the Reconnaissance and Surveillance Vehicle (RSV).

Design and build of the weapon systems for these vehicles is underway at Meggitt Defense Systems, under contract to BAE.
